

How CRE leaders can build an AI-ready workplace

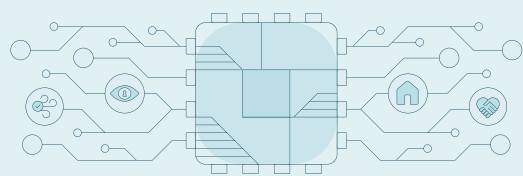

Tech companies need to transform offices into smart, data-driven environments that boost employee engagement and operational efficiency. JLL’s AI-based CRE solutions can help.

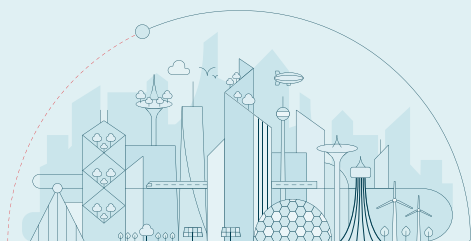

CRE has big AI expectations...

90%

of [companies across industries plan](#) to integrate AI to support human experts in CRE over the next 5 years

Utilizing AI in commercial real estate shifts instinct-driven decision-making to data-driven optimization, transforming buildings and underused spaces into strategic assets. Forward-thinking tech firms understand (and are acting on) this opportunity.

82%

of [technology real estate leaders believe](#) that AI can help solve major CRE challenges

...but implementation barriers exist

CRE leaders cite a range of [obstacles when adopting AI](#):

50%

struggle with data quality and availability, and face cost implementation and budget issues

35%

lack a unified AI strategy

22%

lack skills and talent

JLL leads AI innovation from within

JLL is embedding AI across its operations and tools, transforming how employees work and unlocking previously inaccessible data.

It’s already changing how work gets done at JLL:

More than
200,000
prompts run through JLL GPT every week

Over
47,000
professionals are actively using AI to make faster, smarter decisions

“

“We’re building solutions that equip our clients with better, faster, and more reliable data insights through innovative AI-driven technology.”

Yao Morin
JLL Global Chief Technology Officer

How JLL operationalizes AI for workplace success
